PROFESSIONAL SUMMARY

Data and analytics consultant for **multi-site hospitality and premium F&B retail**, working across **Shopify, POS, workforce and inventory platforms**. Most recently embedded with the CFO of a premium café and retail brand scaling from 30 toward 500 sites, owning the reporting layer spanning e-commerce, POS and supply chain. Builds the reporting infrastructure a fast-expanding estate needs before the estate outgrows it: **12+ sources unified** into a governed data lake, **18% reduction in stock-outs** through ML forecasting (**7.9% MAPE**), **80%+ of manual reporting eliminated**, and **multi-currency and trading-day reconciliation failures** resolved across a live estate.

CORE SKILLS

- **Multi-Site & Hospitality Reporting:** Site-level performance reporting, like-for-like and maturity benchmarking, trading-day reconciliation, multi-currency consolidation, POS/e-commerce/workforce data integration, Tenzo, Power BI (semantic models, DAX), Tableau
- **Forecasting & Supply Chain:** Demand forecasting (LightGBM), production and inventory planning, waste and stock-out reduction, SKU-level analysis
- **Data Engineering & Cloud:** BigQuery, Airflow, Cloud Functions, GCP (Cloud Run, Vertex AI, Cloud Storage), ETL/ELT pipelines, data lake architecture, data governance and quality monitoring, Docker, Kubernetes, CI/CD
- **Commercial:** P&L analysis, break-even and payback modelling, unit economics, KPI and SLA definition, CEO/CFO-level briefing, Agile/Scrum
- **Programming:** Python (pandas, scikit-learn), SQL, DAX, Java (Spring Boot), Git/GitHub, unit testing (pytest, JUnit)

EXPERIENCE

Data & Technology Consultant — Knoops

(Remote, London, UK)

Mar 2026 – Aug 2026

- Retained by the CFO of a **premium F&B retail brand** (30+ UK sites, scaling toward 500) to unify reporting across **e-commerce, POS and inventory platforms**; audited a **51-table, 652-measure** Power BI semantic model and reconciled the weekly trading scorecard against **Tenzo**, closing DAX and metric-definition gaps so one number meant one thing across the estate
- Restored **multi-currency and trading-day integrity** on a live estate: identified a store-migration event that loaded **281 foreign-currency orders as GBP**, a timezone day-shift bug misassigning **540 customers to the wrong trading day**, and **42% order duplication** in the Shopify pipeline
- Built a **four-phase infrastructure-independence roadmap** reducing **third-party vendor and franchise-partner dependency risk**, sequenced so each phase delivered standalone value before the next
- Ran **platform capability assessments** across e-commerce, CRM, POS and inventory systems (Shopify, Klaviyo, Revel/Shift4, Katana, MarketMan), surfacing underused licensed features as trapped revenue; the CRM review alone identified a **£65–80k opportunity** from capability running at ~25% utilisation
- Absorbed **supply chain reporting** after the Stock Operations Manager departed; authored an AI agents strategy paper and executive briefings for the CEO

Data Science Analyst — Icon Life Sciences

(Remote, Hyderabad, India)

May 2025 – Sept 2025

- Unified **12+ data sources** (ERP, CRM, e-commerce) into a governed **BigQuery data lake** using Cloud Functions and Airflow; eliminated **80%+ of Excel work** and enabled near real-time reporting across **108 SKUs** and 25 categories
- Built **LightGBM demand forecasting models** at **7.9% MAPE** to drive production and inventory planning, contributing to an **18% reduction in stock-outs**
- Produced a **business viability analysis** for a capital decision, covering P&L build-up, break-even and an **18–24 month payback** recommendation
- Designed cloud pipelines to data governance standards with quality monitoring ensuring **99%+ valid records**

Founder & Operator — FarmEasy (Micro-Farm)

(Hyderabad, India)

Jan 2020 – Sept 2022

- Founded and ran an end-to-end **food production business** through COVID-19, owning planting, harvesting, packaging, delivery, pricing, customer relationships and cash flow
- Implemented **demand planning and inventory management** to cut waste while holding availability; understands perishability, daily demand variance and service pressure from operating it, not modelling it

EDUCATION & ADDITIONAL

BSc (Hons) Computer Science — University College Dublin, Ireland

Sept 2021 – May 2025

Coursework: Machine Learning, Data Mining, Cloud Computing, Big Data, Algorithms, Performance Engineering, Human-Centred AI

Selected projects: Cloud-native analytics platform (FastAPI, PostgreSQL, Kubernetes, load-tested to 1,100 req/s); LiDAR re-localisation final-year project (Python, Open3D, ICP, KITTI); Spring Boot e-commerce application (auth, cart, admin workflows)

Leadership: Treasurer & Captain, UCD Badminton Club and Music Society — owned a combined **€25k+ annual budget** including forecasting, spend approval and year-end reporting (Jan 2023 – Sept 2024)
